

Retirement Plan Investment Strategies

Period Ending April 30, 2019

This information is designed solely for participants in the AG 403(b) Retirement Plan. Investment strategies include investment in a combination of underlying funds. Fund objectives, risks, charges and expenses of those underlying funds should be carefully considered before investing. A prospectus containing this and other important information is available on our website. Please read the applicable prospectus carefully before investing. Strategy performances are calculated by determining the percentage change in the net asset value of all outstanding unit values at the end of the period. They include the reinvestment of all income.

Track 1: MBA Income Fund

The MBA Income Fund pays a fixed rate that is declared quarterly with interest compounding monthly. It has had an attractive rate of return since inception over 60 years ago. Investment in this fund is used to build churches and ministry facilities across the country.

⁶ Small capitalization (small cap) and mid capitalization (mid cap) investments involve stocks of companies with smaller levels of market capitalization (generally less than \$2 billion for small cap and \$2 billion to \$10 billion for mid cap) than larger company stocks (large cap). Small cap and mid cap investments are subject to considerable price fluctuations and are more volatile than large cap stocks. Investors should consider the additional risks involved in small cap and mid cap investments.

⁷ Large capitalization (large cap) investments involve stocks of companies generally having a market capitalization of over \$10 billion. The value of securities will rise and fall in response to the activities of the company that issued them, general market conditions and/or economic conditions.

⁸ Non-US markets entail different risks than those typically associated with US markets, including currency fluctuations, political and economic instability, accounting changes, and foreign taxation. Securities may be less liquid and more volatile.

⁹ Global equity involves risk associated with investment primarily in equity securities of companies located around the world, including the United States. International securities can involve risks relating to political and economic instability or regulatory conditions.

¹⁰ Investments in emerging or developed markets involve exposure to economic structures that are generally less diverse and mature, and to political systems which can be expected to have less stability than those of more developed countries. Securities may be less liquid and more volatile than U.S. and longer-established non-U.S. markets.

¹¹ Bond investors should carefully consider risks such as interest rate risk, credit risk, securities lending, repurchase and reverse transactions risk. In general, bond prices rise when interest rates fall and fall when interest rates rise. This effect is usually more pronounced for bond with longer-term maturities.

¹² Covered call option writing is designed to enhance portfolio returns during certain markets. The trade-off is that in strong equity markets the upside potential of the equity investment is limited and may cause the investment to underperform the underlying securities.

¹³ The LifePoints® Funds are a series of fund of funds which expose an investor to the risks of the underlying funds proportionate to their allocation. Investment in LifePoints® Funds involves direct expenses of each fund and indirect expenses of the underlying funds, which together can be higher than those incurred when investing directly in an underlying fund. The inception dates for the Russell LifePoints® Strategies are as follows:

- Russell LifePoints® Moderate Strategy Fund – October 2, 1997
- Russell LifePoints® Balanced Strategy and Growth Strategy Funds – September 16, 1997
- Russell LifePoints® Equity Growth Strategy Fund – September 30, 1997
